

New Uhing Timing Belt Drive

The **AZ 1040** is the successor of the tried and tested AZ 2004 timing belt drive Uhing introduced as early as in 1991, which has been the bestseller since then.

The AZ 1040 is made of an undivided profile with integrated carriage guide. This design allows for a greater free stroke in comparison to the predecessor.

Mounting and integration possibilities are also enhanced due to the integrated head pieces made of the same profile. For fastening of attachments, we opted on the tried and tested T-slot principle.

The customers not only take advantage of the technical improvements and the modern design but also of a 30% price deduction.
